

**IN74AC158**

## Quad 2-Input Data Selector/Multiplexer

### High-Speed Silicon-Gate CMOS

The IN74AC158 is identical in pinout to the LS/ALS158, HC/HCT158. The device inputs are compatible with standard CMOS outputs; with pullup resistors, they are compatible with LS/ALS outputs.

This device routes 2 nibbles (A or B) to a single port (Y) as determined by the Select input. The data is presented at the outputs in inverted form. A high level on the Output Enable input sets all four Y outputs to a high level.

- Outputs Directly Interface to CMOS, NMOS, and TTL
- Operating Voltage Range: 2.0 to 6.0 V
- Low Input Current: 1.0  $\mu$ A; 0.1 $\mu$ A @ 25 °C
- High Noise Immunity Characteristic of CMOS Devices
- Outputs Source/Sink 24 mA

This device contains protection circuitry to guard against damage due to high static voltages or electric fields. However, precautions must be taken to avoid applications of any voltage higher than maximum rated voltages to this high-impedance circuit. For proper operation, V<sub>IN</sub> and V<sub>OUT</sub> should be constrained to the range GND≤(V<sub>IN</sub> or V<sub>OUT</sub>)≤V<sub>CC</sub>.

Unused inputs must always be tied to an appropriate logic voltage level (e.g., either GND or V<sub>CC</sub>). Unused outputs must be left open.
