MC74HC05A

Hex Inverter with Open Drain Outputs

The MC74HC05A contains six inverters with open drain outputs. The MC74HC05A is identical to the MC74HC04A, except for the open drain outputs. The outputs can be connected to other open drain outputs to implement active LOW wired−OR or active High wired−AND logic functions. The open drain outputs require pull−up resistors to perform correctly.

Stresses exceeding Maximum Ratings may damage the device. Maximum Ratings are stress ratings only. Functional operation above the Recommended Operating Conditions is not implied. Extended exposure to stresses above the Recommended Operating Conditions may affect device reliability.

*This device contains protection circuitry to guard against damage due to high static voltages or electric fields. However, precautions must be taken to avoid applications of any voltage higher than maximum rated voltages to this high−impedance circuit. For proper operation, V_{in} and V_{out} should be constrained to the range GND $\le$ (V_{in} or V_{out}) $\le$ V_{CC}. Unused inputs must always be tied to an appropriate logic voltage level (e.g., either GND or V_{CC}). Unused outputs must be left open.

†Derating − Plastic DIP: − 10 mW/°C from 65° to 125°C
SOIC Package: − 7 mW/°C from 65° to 125°C
